

INSTALLATION INSTRUCTIONS - REINFORCED STRIPS

These instructions are for installing strips that have a metal insert.

Tools/Equipment: Drill + 1/8" bit + Phillips screwdriver + hacksaw or 12" Miter Saw w/Diablo Blade.

1. Double check measurements to ensure the correct number of **Boing** pieces to do the job

2. Cutting to Size

- the metal reinforced strips can be cut to size with a hacksaw or miter saw. **Watch your fingers!!**
- carefully measure your "total" distance to be covered
- start installation from the 2 **OUTSIDE** ends - work toward the middle
- use full length pieces (1 meter = 39.4") until the space is less than a full piece
- carefully measure the length of this gap
- measure and cut a full size piece of padding to fit into the gap
- see instructions below for making additional holes if necessary

Freud Diablo Non-Ferrous 96T x 12"

3. It you need to drill any **extra** holes:

Note: All reinforced strips come with 6 pre-drilled 1/2" holes and plastic caps.

- use a 1/4" Forstner bit (or same size as head of screw) to drill a "clean" hole through the foam
- use a 1/8" bit to drill down through the aluminum plate
- if possible, drill all the holes off-site so you do not have aluminum shavings to clean up (safety in kids areas!)

4. Fill holes to cover screw head

- if you just used the existing holes, insert plastic caps into the 1/2" holes to cover the screws
- the caps are just pressure fit, so you may wish to use some silicone for a more semi-permanent attachment
- if you drilled your own holes, fill with silicone

5. Using silicone to attach reinforced strips:

- see the basic installation instructions if you do not want to drill holes in the area you want protected

6. Option: add a small "bead" of silicone around the outer edges to limit attempts to peel off.

- clean off any excess silicone - see Silicone Removal on website FAQ's

7. Silicone takes about 24 hours to fully cure

SILICONE REMOVAL - use DAP "Silicone-Be-Gone" (see DAP website for store locations)

DAILY/WEEKLY CLEANING & MAINTENANCE:

Use any general household cleaner + soft cloth

Do not use harsh abrasive scrubbing agents

Do not use strong chemicals like Citrus spray or Bleach
